Materials Design and Technology

A teacher survey carried out during the professional development day in April for the Materials Design and Technology course has indicated that in addition to the development of assessment support material, significant course syllabus refinement is required and context specifications need to be developed for the course.

To address these matters and ensure that all views are represented, the Council will form a reference group that will include the present ARM panel members, additional teachers from all sector/systems, teacher jury members and representatives from other key stakeholders.

The group's initial work will be to provide advice on the syllabus revisions and context specifications so the course can be revised during this year.

Materials Design and Technology proposed syllabus revisions and support materials will be discussed at the planned professional development day on 13 October 2008.
